Infrastructure & DevSecOps Engineer

Linux Systems, Cloud Infrastructure, Security Automation & Technical Leadership

Infrastructure and DevSecOps engineer combining hands-on Linux systems administration, cloud and hybrid infrastructure, automation, and security engineering with technical leadership. Experience spans repeatable deployments, container platforms, performance troubleshooting, incident response, and secure configuration management. Leads cross-functional delivery, translates security requirements into engineering work, and supports reliable operations through practical documentation and consistent processes.

CORE COMPETENCIES

◊ Linux Systems Engineering	◊ Cloud & Hybrid Infrastructure	◊ Infrastructure as Code
◊ DevSecOps & CI/CD	◊ Containers & Kubernetes	◊ Configuration Management
◊ Security Engineering & RMF	◊ Monitoring & Reliability	◊ Incident Response
◊ Technical Operations	◊ Project & Program Delivery	◊ Cross-functional Leadership

PROFESSIONAL EXPERIENCE

Boeing — Boeing Software Factory

Senior DevSecOps Engineer

April 2026 – Present

- Standardize corporate software-development toolchains and reusable DevSecOps workflows within Boeing Software Factory, coordinating with engineering teams to align developer tooling, configurations, and delivery practices.
- Support GitLab CI/CD pipelines, container image builds, and Kubernetes/Helm deployments for shared developer tooling; troubleshoot build and deployment issues and contribute to repeatable delivery automation.
- Strengthen enterprise security posture by integrating security checks and consistent configurations into development toolchains and delivery pipelines, working with engineering and security teams to address findings and document practices.

Boeing Defense, Space & Security

Lead Information Systems Security Engineer

June 2025 – April 2026

- Led engineers as the program security authority, coordinating hardening, automation, and remediation across integrated engineering teams while maintaining hands-on technical contributions.
- Integrated security requirements with software development, testing, and systems engineering; supported Linux and Kubernetes configuration review and operational troubleshooting.
- Authored RBDs and POA&Ms under NIST 800-53, translating findings, remediation priorities, and technical evidence into clear stakeholder reporting.
- Restored security milestone delivery and guided the ATO renewal review, coordinating evidence packages, documentation, and cross-team remediation with program schedules.

Senior Systems Engineer

April 2023 – June 2025

- Developed Packer, Ansible, and MAAS workflows for repeatable bare-metal and virtual-machine image deployment; automated Oracle Linux provisioning and configuration.
- Partnered with security and system software teams to implement NIST 800-53-aligned Linux hardening and automate security control updates through Ansible playbooks.
- Supported Kubernetes workloads and Linux infrastructure, troubleshooting deployment, configuration, and performance issues with software and systems engineering teams.
- Maintained automation code and deployment procedures, improving consistency of infrastructure changes and coordinating integrated systems delivery across program teams.

Regional Technical Operations Manager

- Led regional technical operations and a team of tier I–III technicians, coordinating client infrastructure projects, executive stakeholders, escalations, and daily service delivery.
- Rebuilt internal infrastructure using VMware, Docker, AWS, and Red Hat Linux; supported Kubernetes workloads and resolved infrastructure and container operations issues.
- Monitored RHEL performance, investigated bottlenecks, and tuned resource utilization; used event monitoring and diagnostic findings to guide incident resolution.
- Designed and configured client networks and managed system configurations with Ansible, incorporating secure configuration practices and NIST 800-53 controls.
- Supported Windows and Active Directory environments alongside Linux systems, coordinating access administration, troubleshooting, and client infrastructure changes.
- Standardized support workflows, incident response procedures, and technical documentation in alignment with NIST 800-61 and CSF guidance; shared troubleshooting practices with technicians.

NPC Technologies

February 2018 – November 2021

Systems Administration Freelancer

- Administered client servers and networks through remote monitoring tools, reviewing system health, conducting security scans, troubleshooting faults, and deploying software.
- Supported Linux and Kubernetes environments through configuration, routine maintenance, and troubleshooting alongside client workstation and network services.
- Built custom computers and installed client networks and residential security systems, coordinating requirements, setup, and ongoing technical support directly with clients.
- Maintained and repaired computers, laptops, and mobile devices; diagnosed hardware and software problems and explained practical repair and replacement options.

Silva Ortiz Contracting

July 2015 – August 2020

Project Manager

- Managed client portfolios and construction projects across multiple job sites, coordinating schedules, budgets, employees, contractors, and stakeholder expectations.
- Negotiated vendor agreements, contracts, and purchase orders to align materials and services with project requirements and budget constraints.
- Maintained OSHA-compliant work environments and coordinated safety practices across job sites, addressing risks alongside delivery and staffing priorities.
- Revised employee training and operational processes to support productivity, consistent execution, and customer satisfaction.

TECHNICAL SKILLS

Systems & infrastructure: Linux, Red Hat, Oracle Linux, Windows, Active Directory, macOS, VMware, Proxmox, AWS, Cloudflare, networking.

Automation & delivery: Ansible, Terraform, Packer, MAAS, Kubernetes, Docker, Helm, GitLab CI/CD, GitHub Actions, Git, Python, Bash, PowerShell.

Security & operations: Systems hardening, NIST 800-53, RMF, incident response, access controls, Prometheus, Grafana, NGINX, operational documentation.

Collaboration & tooling: GitHub, GitLab, Bitbucket, Jira, Ollama.

EDUCATION & CERTIFICATION

Bachelor of Science – Business Management

Western Governors University

B.S. Computer Science (In Progress – Final Term)

Western Governors University

Red Hat Certified Engineer (RHCE)

Red Hat Certified System Administrator (RHCSA)

Hashicorp Certified Terraform Associate

CompTIA Network+ Certificate

CompTIA Security+ Certificate

CompTIA Project+ Certificate

ITIL 4 Foundation Certificate

HOME LAB PROJECTS

- Designed and deployed a Proxmox-based hypervisor hosting workloads across unprivileged LXC's, VMs, and Docker containers with VLAN-isolated service categories, complemented by AWS infrastructure managed via Terraform for hybrid cloud provisioning.
- Architected a multi-VLAN network with dual WAN failover, implementing advanced firewall rules and inter-VLAN routing policies to enforce zero-trust segmentation across lab services.
- Built a private LLM inference stack using Ollama with local model hosting and cloud API integration, extending it into a multi-agent automation pipeline with human-in-the-loop approval for end-to-end workflow automation.
- Deployed Nginx Proxy Manager with wildcard SSL and Cloudflare for DNS and edge security, with a GitHub Actions CI/CD pipeline publishing static sites to Cloudflare Pages for automated, secure content delivery.
- Deployed a self-hosted Prometheus-Grafana monitoring stack to track system health, resource utilization, and performance metrics across the lab environment.
